Our initial forays onto the Lake started over twenty years ago with two 24 foot canoes powered outboards. These were times of real adventure, venturing on a Lake that had remained largely uncharted since the 1970's after the initial exploration of the Lake by a scotsman Mr. Mc Connel. We experienced a whole new world, meeting the local people steeped in their culture and traditions as never seen before. From the Omo Delta region in the north via the prehistoric Koobi Fora (The Cradle of Mankind) down past Sibilo Park and to the volcanic Central Island we journeyed.

Down past Central and South islands that stand etched against a beautiful backdrop of the Jade coloured waters of the lake we navigated, unto Nabuyatom (the volcanic/mud cone shaped dome.) The logistics and experiences from these safaris lead us to the introduction of our 2 metre beam Italian redesigned Felucca based canoes that were designed to handle the harsh open water conditions of the Mediterranean Sea. We complimented these with Boston whaler design based speedboats .
